

The Sky this Month

Oscar Wright

November 2021

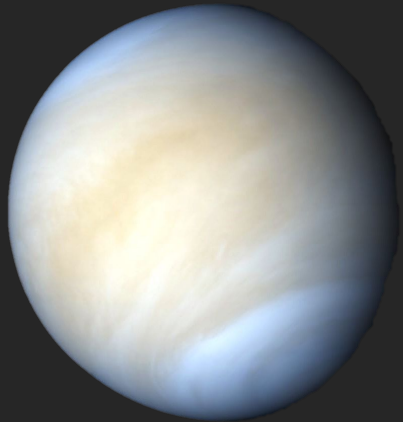

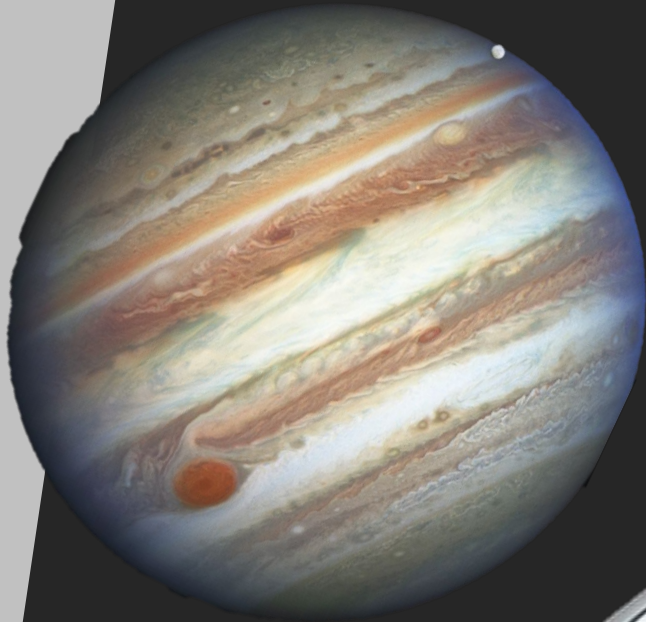

The Moon

- Full moon: 19th November
- Brilliant views through binoculars and telescopes of craters and the great “seas”
- Cycles between new and full

The Planets

- Jupiter, Saturn, and Venus are all Visible until the end of the year
- Great to observe through even small telescopes!

Jupiter

Saturn

S

SW

November

- Asteroid 67P: Not visible to the naked eye but currently the brightest comet in the sky
- Leonid meteor shower: meteors observable every 4 mins, with the peak today!
- Full moon: 19th November

December

- **Moon:** New moon on 4th, full moon on 19th
- **Winter Solstice:** 21st December, the longest night of the year
- **C/2021 A1 Comet:** This comet will be just 0.2 AU from Earth, and at a magnitude of 4, it will be visible with binoculars!
- **Geminid Meteor Shower:** One of the best meteor showers of the year, 120 meteors per hour!!!

Observation Equipment: Binoculars

- Any binoculars will provide a much better view of the night sky than by using your eyes
- I recommend 10x50 or greater (e.g. 20x80)

Observation Equipment: Telescopes
